

Robert Pattinson Is the World's Most Beautiful Man According to Science

Science is Team Edward.

In October 2019, U.K. outlet the [Daily Mail](#) reported that [Bella Hadid](#) had been "declared the **most beautiful woman in the world**." And now, [Robert Pattinson](#) has been **declared the "most handsome man."**

As *Daily Mail* writes, [the Batman star's](#) eyebrows, eyes, jaw, nose, lips and general facial shape were measured against the features of other male celebrities, and he apparently came the closest to the ancient Greeks' idea of "perfection." That idea of perfection is determined by using The Golden Ratio of Beauty Phi, a technique believed to be used by painters in the European Renaissance.

Since its creation, scientists have developed a mathematical formula "to help explain what makes a person beautiful." And that formula produces a percentage that determines how close to "perfection" someone's face is. Pattinson, according to this formula, came in at 92.15 percent.

In addition to [the Twilight star](#), the list of the world's "most handsome" men is comprised of nine other celebrities.

In second place is [Henry Cavill](#) (91.64), who is then followed by [Bradley Cooper](#) (91.08), [Brad Pitt](#) (90.51), [George Clooney](#) (89.91), [Hugh Jackman](#) (89.64), [David Beckham](#) (88.96), [Idris Elba](#) (88.01), [Kanye West](#) (87.94) and [Ryan Gosling](#) (87.48). In comparison, Hadid's percentage was 94.35.

The outlet credits these findings to Harley Street facial cosmetic surgeon [Dr. Julian De Silva](#), who uses computer mapping techniques in his work.

As he said, "These brand new computer mapping techniques allow us to solve some of the mysteries of what it is that makes someone physically beautiful and the technology is useful when planning patients' surgery."
