

# HOLA!

## Neither Brad Pitt, nor David Beckham: the most handsome man according to science is ... Robert Pattinson!

The British actor is the one who comes closest to the concept of numerical facial perfection

Sometimes, the famous saying 'for tastes there are colors' falls short to explain why a person is attractive. And it is that, leaving aside the factor of subjectivity, there are certain male names that most of society has in mind when talking about beauty . Men of the *star system* known any generation as **Brad Pitt** , George Clooney and **David Beckham** are clear examples of that besides personal tastes, there is something that goes further and makes them 'objectively' attractions. What is it? The science. Dr. Julian De Silva , director of the London Center for Cosmetic and Advanced Facial Surgery, has carried out a study of facial mapping of the most relevant *celebrities* on the current scene and has concluded that **Robert Pattinson** is the one that is closest to the numerical idea of facial perfection . **A title that Bella Hadid holds among women.**
